SELF-MANAGED VDI VS MEDICAL GRADE VDIPOD

Many healthcare organisations have struggled to get VDI to work effectively. Tired of performance issues, security headaches and user complaints, those in the know are turning to medical grade VDI from a specialist provider.

And for good reason.

What's the difference?

Quite a lot, actually.

VDI in the right hands can be engineered for the most demanding of healthcare settings, including radiologists working with medical applications and HD clinical images. A specialist MSP with a successful VDI track record in healthcare will help unlock the full benefits.

|	SELF-MANAGED VDI		VDIPOD FROM CREATIVE ITC
MOBILITY	Power users working with graphics-heavy PACS applications are unable to view HD medical images, leaving radiologists shackled to their workplace IT	VS	Greater mobility and ability to work effectively from anywhere with real-time access to HD images, apps and medical systems.
SOLUTION DESIGN	Out-of-the-box products wrongly assume all staff have the same VDI needs and cannot overcome issues with legacy infrastructure.	VS	A purpose-built platform with best-of-breed technologies, with tailored VDI profiles right-sized for heavy-graphics users and knowledge workers.
USER EXPERIENCE	Degraded by sub-standard compute or storage resources, WAN connectivity, and device problems.	VS	Employees suffer less downtime, with performance identical to or better than they enjoy in the workplace and improved version control.
SECURITY & COMPLIANCE	Unable to allocate VDI workloads and issues managing remote devices to meet security and regulatory compliance.	VS	VDI consumption in a private cloud, on-premise, or using a hybrid model, in one seamless solution, with centralised updates and patch management, and improved data security and built-in DR.
PLANNING	Competing IT priorities and complex projects to manage.	VS	Deep virtualisation knowhow and understanding how industry apps and networks behave to optimise performance.
TECHNICAL SUPPORT	Lack of in-house specialist skills and resources to implement and support long-term VDI deployment.	VS	Best in the business, highly qualified VDI specialists design, deploy, optimise and manage, including 24/7 support and proactive monitoring from our UK Operations Bridge.
FUTURE-PROOFING	New features, evolving technologies and upgrades incur additional expense.	VS	Benefit from access to the latest technologies and agility to continuously develop the platform further.
SCALABILITY	Incur delays and costs when trying to upgrade technologies or expand deployment.	VS	Burst capability to upgrade VDI profiles and add new users to meet fast-changing business needs.
BUDGET	Poor optimisation, licencing complexity and difficult usage tracking, result in unpredictable and unplanned VDI costs.	VS	Cost-effective, predictable monthly costs, with different user profiles and flexible credits IT teams can stipulate and reallocate.
BUSINESS CASE	Poor return on investment caused by incurring hefty CapEx costs for hardware refreshes, and growing maintenance costs.	VS	Unlock greater value with savings on data centre space, infrastructure, upgrades, licensing, app deployment, salaries, training and support

What will VDIPOD look like?

Don't bite off more than you can chew. Be honest about your in-house skillsets and resources to effectively manage VDI long term. Creative's industry-leading specialists have or are close to achieving the highest qualifications in their field. They'll take care of all the heavy lifting - designing, deploying, optimising and ongoing management and support.

We'll support your team with:

- Desktop management
- Windows Licensing
- Access devices – PCs, laptops, tablets etc.
- Applications
- Gold image creation

We'll take care of:

Hardware
- Servers
- Storage
- Backup
- Networking infrastructure

Software
- VMware
- Server/ data store
- Patching and updates

Facilities
- Datacentre
- Racks
- Power and cooling
- Security

Support
- 24/7/365 technical support
- Power users' VDI desktops

The result

Improved mobility, collaboration and patient outcomes

A headache-free remote working solution that boosts user experience, collaboration and productivity across your entire workforce, with specialist support freeing up in-house resources for innovation and transformational projects.
