DEBUNKING VDI MYTHS

Complexity, unplanned costs, security risks, frustrated users and stretched IT resources have become common pitfalls as healthcare organisations adopt VDI in the shift to long-term remote and hybrid working models.

But not all VDI solutions are built equal or consistently deliver the same results. So, make doubly-sure you've got all the facts straight.
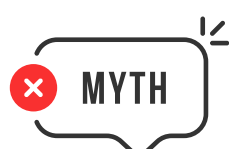

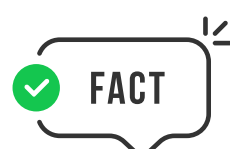

MYTHS — VS — FACTS

"VDI isn't up to the job." — MYTH

Remote heavy graphics users get inferior experience to the workplace and cannot work with high definition clinical images

Designed as a one-size-fits-all product rather than end-to-end, creating issues downstream

Unable to meet data sovereignty, security and compliance requirements

Yes, it is. — FACT

VDIPOD was purpose-built to handle the most demanding healthcare workloads like HD radiology scans

All core VDI pillars taken care of - from devices and cloud to storage, security and management

VDIPOD is the only platform that can be consumed on-premise, in the cloud or in a hybrid model in a single, seamless solution

---

"VDI is complex." — MYTH

Healthcare organisations must acquire new skills through training or onboarding new specialists

Siloed legacy infrastructure or inaccessible cloud systems obstruct troubleshooting and delay issue resolution

It's another task handed down to stretched IT teams with limited resources

No, it's not. — FACT

Our experts hold the highest accreditations and do all the heavy lifting, providing a fully managed solution

Fully optimised VDIPOD platform with best-of-breed technologies, proactive monitoring and 24/7 technical support from our UK Operations Bridge

Specialist support frees up in-house IT resources for innovation and transformational projects

---

"VDI takes ages to perfect." — MYTH

Standard solutions have long lead times to test, refine and fully deploy

VDI is only as strong as its weakest link, which makes it prone to crashes

Not built with full long-term workforce mobility in mind, so too easily stretched

No, it doesn't. — FACT

Our vast experience means we can deploy fully optimised solutions fast and spin-up proofs-of-concept in <1 hour

VDIPOD combines leading-edge technologies and our experts have deep understanding of virtualisation and how apps and network services behave together to avoid issues

Proven effectiveness for all employees, with successful deployments in demanding healthcare and global enterprise-scale settings

---

"VDI is too expensive." — MYTH

End up paying for spare server capacity and licences that aren't needed

Unclear variable charges that can change month by month

More cost to acquire updates, support and technologies over contract

No, it's not. — FACT

Flexible per user pricing with credits that IT team can reallocate for burst capability and scalability

Cost-effective, predictable monthly costs differentiated between power users and knowledge workers

Benefit from fully-managed solution on our purpose-built VDIPOD platform, with access to leading edge technologies and continuous updates

---

Many providers claim to have the most highly qualified VDI specialists in the industry. In our case it's true.
